INDEX TO VOLUME III.

☞The great number of our articles or items, prevents us from putting them under more than one head; and possibly our readers may sometimes be disappointed from not finding at first the object of their search. We can assure them however, that no reasonable pains have been spared on this index; and we would respectfully suggest that if they would carefully look it over, they may better understand its manner and design. It is also possible that in so doing some things fresh and new may be discovered.
